### **Review of T2000 on eweek**

eweek published a review of the T2000. The verdict is very positive. They rate the system with an "excellent" for capability.

Armed with Sun's latest SPARC processor, the Sun Fire T2000 server provides exceptional performance while lowering power consumption and improving server density. Our tests show the midrange server, equipped with the new eight-core UltraSPARC T1 processor, is capable of providing excellent threaded performance for Web and application server workloads.
