T2000 is four times faster then XEON

Robert Milkowski made some near-production benchmarks with Xeon. As a dynamic webserver the T2000 was 4 times faster than a dual proc XEON and still two times faster than a dual core dual proc Opteron rig. (Update:Robert told me as an reply to this entry that it was not a near production benchmark, it is in their production system)

Posted by Joerg Moellenkamp in English, Oracle at 10:40

Actually it was real production in largest free email system in Poland.
