Trusted Extensions in Solaris 10 11/06

There are some reports about the new Trusted Extensions. For example this one at ITjungle:Sun is going for the Common Criteria trifecta in its testing. The plain vanilla Solaris 10 platform is being evaluated at the EAL4+ level for three different profiles: Labeled Security Protection Profile (LSPP), Controlled Access Protection Profile (CAPP), and Role-Based Access Control Protection Profile (RBACPP). Solaris 10 11/06 with Trusted Solaris Extensions is being evaluated for the LSPP; Sun did not say which level, but presumably it will be higher than EAL4+.
