### **Tigerton a real threat for AMD?**

Scientia explains in his blog, why Tigerton isn't a real threat to AMD K8L Quad. It's an excellent article which describes the problems of Intel. In my opinion, we will see severe benchmarking. I'm sure, that some benchmarks can live with the constraints of Tigerton, but system performance on real life task will be severely hurt by the FSB-architecture. I strongly believe that AMD was the correct choice for Sun at the long run.
