### **New Apple commercial: The Macbook Pro is the fastest Vista notebook**

This was an excellent opportunity in the direction of the rest of the market. Apple wasn't allowed to let it pass:

The background: The PCworld announced some weeks an unlikely winner in the race for the fastest Vista Notebook: The fastest Windows Vista notebook we've tested this year is a Mac. Try that again: The fastest Windows Vista notebook we've tested this year--or for that matter, ever--is a Mac. [...] by a single point, but the MacBook's score is far more impressive simply because Apple couldn't care less whether you run Windows. And by the way, Solaris and Opensolaris runs quite fine on this notebooks, too. Well, hopefully enough stuff to convince my manager, that i'm still not want this Toshiba junk ...
