### **Less known Solaris features: RBAC and Privileges**

I've wrote a quite long tutorial about RBAC and privileges. I had to divide it into 4 seperate parts:

Less known Solaris features: RBAC and Privileges - Part 1: Introduction  
Less known Solaris features: RBAC and Privileges - Part 2: Role based access control  
Less known Solaris features: RBAC and Privileges - Part 3: Privileges  
Less known Solaris features: RBAC and Privileges - Part 4: Epilogue

PS: The topic is quite complex, thus i simplified some coherences. I hope i didn't oversimplified them ...

regarding privileges:

I will never forget a date at a major customer in germany. I was supposed to install a systems-management package. They put me in front of a HP-system, gave me the root password and left for lunch.

After they came back they asked me: "Everything worked fine? by the way: this is our SAP-production system, hopefully you did not screw anything up?"
