Less known Solaris Features: CacheFS - Part 8: Conclusion

CacheFS is one of this features even some experienced admins aren't aware of. But as soon as they try it, most of them can't live without it. You should give it a try.

This article of CacheFS is much appreciated.

CacheFS sounds quite good for my work.

One major concern is it does not work with NFS version higher than 3. We are updating all our servers to the newest version of Solaris 10. If CacheFS can work with higher version of NFS, that is critical to me.
