Peter Galvin about Storage Analytics

Peter Galvin publishes an column in the ;login: magazine - a publication of the USENIX and often an really insightful read. This time he wrote about the Storage Analytics part of our new storage appliances - Galvin.info: My latest column at ;login:Overall, the use of the analytics component of the Sun Storage 7000 NAS appliance is amazing, allowing exploration of every aspect of the performance, load, and status of the system. [...] On the whole I'm glad to leave behind the Middle Ages of performance analysis and look forward to the new tools of the modern age
