Perl 5.10.1 with dtrace support

Looks like Perl will have integrated dtrace support soon. The Install file of the Release Candidate 1 for Perl 5.10.1 states: On platforms where DTrace is available, it may be enabled by using the `-Dusedtrace` option to Configure. DTrace probes are available for subroutine entry (`sub-entry`) and subroutine exit (`sub-exit`). Here's a simple D script that uses them:
