Upcoming joint announcement of Sun and Oracle

There is an interesting invitation for an upcoming announcement at the Sun home page: You're invited to see the World's first OLTP Database Machine with FlashFire technology. This event will happen Tuesday, September 15, 2009, 1 p.m. PT and will be held by Larry Ellison and John Fowler. There will be a webcast, too. You can register for the webcast here. A similar announcement is on the Oracle website.

Posted by Joerg Moellenkamp in English, Oracle at 21:35

Will be interesting what config they use.

pulling numbers from thin air i'd guess:
4x T2+
128GB RAM
512 GB of those so-dim flash modules

But i will be wrong and it is a 4 socket rainbowfalls system for 500\$/month lease.

Finally professional mngt. is coming to Sun! Why did Sun not build something similar with MySQL? A MySQL appliance with Osol+ZFS+SSD+dtrace+x86/Tx+BUI?

Speculation:

8 Socket Nehalem-EX 1TB ram + 4x F5100 driven by 16x LSI SAS2.0 HBAs per node?

That would be porn.
Anonymous on Sep 14 2009, 20:18

well no f5100
<http://www.sun.com/launch/2009-0915/index.jsp>

just x4170 and x4275

I like the new Sun Oracle Label (http://www.sun.com/images/k3/k3_05_qs_4170_detail.jpg)

"Includes Oracle Enterprise Linux"

What did they think....
Anonymous on Sep 15 2009, 21:28

Is Oracle 11g certified for Solaris x86?

But it is a good hint concerning the rumors at Sun's x86 hardware, because it wasn't mentioned in the famous ad.
