### **New software for the Sun Storage 7000 series**

There is a new version of the software for the Sun Storage 7000 series. You can download it at the usual location. This software version provides a lot of new features:

Infiniband Support via IPoIB

Improved iSCSI

Preview of a NFS/RDMA

User quotas and space accounting

In wide-stripe configurations the triple parity RAIDZ3 substitutes dual parity RAIDZ2

Shadow migration. You can use this feature to migrate data from other systems with little downtime, as it is done when the data is accessed by the users

vastly faster cluster-failover times

You will find a complete list of changes in the release notes at [wikis.sun.com](http://wikis.sun.com)

The new release absolutely rocks! Cluster-Failover several times faster.

Looking forward to test shadow migration. Helps us throwing Netapp out faster...
