Codenews 2.1

I've made a slight extension to the codeview pages: There is an overview page for all the announced putbacks on onnv-notify now. On this page you can browse through all the putbacks that found their way to the mailinglist since 01.08.2009 17:39:17.

I'm aware of this page. However look at the page as an additional service for you and additional training in PHP and python for me
