Yet another update to the Solaris 11.3 cheatsheet

Some typos fixed, some clarifications included, some content added, a layout quirk removed. There is a new version of the Solaris 11.3 cheatsheet. You will find the new cheatsheet (version of 19.05.16 22:08 when you look at the last page) at the known location

PS: I just saw i forgot to update the contributions list ... dang will be in the next update.

Posted by Joerg Moellenkamp in English, Solaris at 07:02

I prefer "zlogin ZONENAME init 5" to stop a zone because "zoneadm -z ZONENAME halt" is like "switch the power button".

Try zoneadm -z \$zone shutdown
