Ideas for Solaris 11 Cheatsheets?

Just a short question: Do you have any topics you would like to see in further versions of the Solaris 11 cheat sheet?

```

I don't think that this should be part of Solaris cheat sheet. Would justify an own Cluste cheat sheet.

Nixe summary Jörg!

What' about "mdb" (e.g. memstat, panic_thread, msgbuf), "kstat" or some commands functions compared to GNU-userland cmd like "digest", or functions like "format/purge" or "truss" and "dtrace"...
Not really pure Solaris but "LDOM" cmds or "Solaris Cluster" might complete the sheet and let it be more like a "Solaris Bible"
Thanks for this great work!

Hoffentlich bis bald und liebe Grüße aus Wien,
- PRESSY

Looking for a small cluster cheat sheet? I wrote one some months ago for a customer training:

Hi,
It would be helpful if you can add Sun4U (Solaris 10) to Sun4V migration steps.
Regards
Pk

How to change your hostname and IP-Address in Solaris 11, as in
http://solaris.kuehnke.de/archives/28-How-to-change-your-hostname-and-IP-Address-in-Solaris-11.html
   Anonymous on Jun 9 2016, 15:03

bootadm stuff like install-bootloader is great since it's for the first time the same command for SPARC and X86.

Hello,
it would be nice to get a version to print as a A5 booklet.
